

AMREEN KOUSAR

Software Engineer | Distributed Systems & Cloud | MS Computer Science, CSULB |
AmreenKousar.Shaik01@student.csulb.edu |
+1 562-269-6008 | Long Beach, CA | [linkedin.com/in/shaikamreenkousar](https://www.linkedin.com/in/shaikamreenkousar) | [Portfolio](#)

EDUCATION

Master of Science in Computer Science California State University, Long Beach (CSULB) **Graduation May 2027**

Coursework: Programming Languages, Software Engineering, Algorithms, Distributed Systems

B.Tech in Computer Science (GPA: 3.69/4.0) JNTU Anantapur – MITS **Aug 2019 – May 2023**

Coursework: Data Structures, Algorithms, OOP, Operating Systems, Database Systems, Computer Networks

TECHNICAL SKILLS

Languages: Python, Java, JavaScript (ES6+), TypeScript, SQL, Go, C++, PHP

Data Structures & Algorithms: Arrays, trees, graphs, dynamic programming, BFS/DFS, OOP design patterns, system design

Backend & Distributed Systems: Node.js, Spring Boot Express.js, Nest.js, REST APIs, GraphQL, microservices architecture

Cloud & DevOps (AWS): EC2, S3, CloudFront, Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI)

Databases (SQL & NoSQL): PostgreSQL, MySQL, MongoDB, Redis (caching & pub/sub), Firebase

Frontend & Mobile: React.js, Next.js, Angular, Redux, React Native, Tailwind CSS

AI/ML & GenAI Tools: Python ML pipelines, NLP classification (IEEE published), AI-powered app integration, GenAI dev tools

Observability & Operations: Uptime monitoring, performance profiling, alerting, production incident response

Practices: Agile/SCRUM, TDD, code reviews, technical documentation, SDLC, version control (Git/GitHub/GitLab)

PROFESSIONAL EXPERIENCE

Senior Software Engineer AMD – Infobell IT Solutions **Mar 2024 – Dec 2025**

- Architected scalable full-stack microservices using React.js and Node.js, owning full lifecycle from design through deployment and ongoing operations for systems serving 100K+ enterprise users.
- Designed and developed scalable solutions using cloud-native architectures on AWS (EC2, S3, CloudFront), following clean code principles and established design patterns.
- Optimized REST APIs and PostgreSQL/MongoDB queries, reducing response time by 35% through query tuning, Redis caching, and Cloudflare CDN integration.
- Automated CI/CD pipelines with GitLab and AWS, reducing deployment time by 40%; implemented monitoring and alerting to demonstrate operational excellence and enable rapid incident resolution.
- Led code reviews and contributed to technical documentation; mentored junior engineers on OOP principles, data structure best practices, and version control workflows.
- Leveraged GenAI and AI-powered developer tools to enhance development productivity and code quality across the team; stayed current with emerging technologies.

Full Stack Web & Mobile Developer Infobell IT Solutions **Jan 2023 – Mar 2024**

- Developed and deployed cross-platform mobile applications (React Native) to App Store and Play Store, owning full lifecycle from architecture to production operations with 99.5% uptime.
- Built resilient, fault-tolerant backend services and managed complex Redux state across distributed React.js frontends for enterprise-scale applications.
- Integrated Firebase for real-time notifications, deep linking, and authentication, increasing user engagement by 30%.
- Designed scalable MongoDB schemas with optimized indexing for high-throughput data retrieval; monitored database performance and resolved production incidents proactively.
- Participated in code reviews and contributed to technical documentation; mentored junior engineers on clean code principles and systematic debugging of distributed systems.
- Applied object-oriented design principles and algorithmic thinking to build cost-effective, maintainable solutions delivered within agile development cycles.

MEAN Stack Developer Intern Redbee 365 Studio **Sep 2022 – Dec 2022**

- Built a production web application using Angular, Node.js, Express, and MongoDB; wrote clean, maintainable code

following OOP design patterns and industry best practices.

- Improved API response time by 25% through database indexing, query optimization, and profiling — hands-on exposure to data-driven performance engineering.

FEATURED PROJECTS

NativeNest – Cloud-Native E-Commerce Platform | Android | iOS

Jun – Oct 2025

React.js — React Native — Node.js — PostgreSQL — Redis — AWS — Docker — Kubernetes — Cloudflare — GitHub

- Designed and developed a cloud-native, fault-tolerant e-commerce platform (web + mobile) serving 30K+ concurrent users using microservices on AWS EC2 with Docker and Kubernetes.
- Implemented Redis caching layer reducing database load by 60% and achieving sub-100ms API response times; set up monitoring and performance dashboards demonstrating operational excellence.
- Built resilient CI/CD pipelines with GitHub Actions achieving 99.9% uptime; applied code splitting and lazy loading to achieve Lighthouse score 94/100.
- Owned the full engineering lifecycle: system design, implementation, deployment and production operations.

Origem India – High-Performance E-Commerce Platform

Feb – May 2025

Next.js — Node.js — MongoDB — AWS EC2 & S3 — Cloudflare — Stripe — Razorpay — JWT — Python

- Designed and developed a scalable, server-side-rendered web application on AWS EC2 and S3 with Cloudflare CDN, achieving fast global content delivery and high availability.
- Architected distributed backend services with JWT authentication, Stripe/Razorpay payment integrations, and real-time inventory management using cost-effective data architecture.
- Wrote Python scripts for data pipeline automation, product catalog ingestion, and performance monitoring; applied algorithmic optimisation for search and filtering at scale.

B4IGO – Secure Digital Asset Management Platform

Jan – Dec 2025

React.js — React Native — Node.js — MongoDB — Blockchain — AWS — Firebase

- Designed and built a fault-tolerant, distributed platform for secure digital asset management with multi-factor authentication, advanced encryption, and blockchain-based tamper-proof storage.
- Deployed scalable backend microservices on AWS with real-time Firebase sync; implemented operational monitoring and alerting to maintain uptime SLAs and resolve production issues rapidly.

ASI ADP Job Alerts – Real-Time Automated Notification System

Jan 2026

React — Node.js — MongoDB — GitHub Actions — Vercel — Python

- Built an end-to-end automated job alert system with Python-based web scraping, real-time data ingestion, and scheduled email digest delivery directly impacting CSULB students seeking employment.
- Designed CI/CD with GitHub Actions for zero-downtime deployments; architected MongoDB backend for scalable subscription and job data management.

Upturn – AI-Powered Stock Advisory App | iOS App

Oct 2023 – Feb 2024

React Native — Angular — Firebase — Python — iOS — Android

- Developed an AI-powered personalized stock advisory mobile app with custom Robo-Portfolios, real-time Firebase notifications, and deep linking for iOS and Android.
- Integrated AI recommendation engine APIs using Python; optimized React Native performance for cross-platform responsiveness and low-latency data rendering.

PUBLICATIONS & RESEARCH

Accurate Fake News Detection in Text-Based Content using NLP & Machine Learning

July 2025

2025 International Conference on Computing Technologies & Data Communication (ICCTDC) — IEEE Xplore
