WORK EXPERIENCE

Senior Software Engineer **AMD – Infobell IT Solutions Pvt Ltd** *Bangalore, India* **03/2024 – 12/2025**

- Engineered scalable full-stack applications, serving **100K+** enterprise users.
- Built multiple responsive web interfaces with **React.js**, and **Node** managing complex state across multiple components efficiently.
- Automated CI/CD pipelines with **GitLab** and **AWS**, reducing deployment time by **40%** and ensuring zero-downtime releases.
- Integrated **Cloudflare CDN and caching strategies** to optimize content delivery, reduce latency, and enhance security through DNS management and SSL configuration.
- Optimized REST APIs and database queries, improving application response time by **35%** through efficient data handling.
- Collaborated in Agile sprints using **Jira**, delivering features adhering to strict timelines and client requirements.
- Implemented reusable UI components and backend integrations ensuring maintainability and code quality.

Full Web and Mobile Developer **Infobell IT Solutions Pvt Ltd** *Bangalore, India* **01/2023 – 03/2024**

- Developed cross-platform mobile applications using **React Native**, deployed to **App Store and Play Store** with **99.5% uptime**.
- Built responsive web interfaces with **React.js** and **Redux**, managing complex state across multiple components efficiently.
- Integrated **Firebase** for real-time notifications, deep linking, and authentication, enhancing user engagement by **30%**.
- Designed database architectures in **MongoDB**, optimizing data retrieval and storage for scalability.
- Mentored junior developers on React best practices, code reviews, and version control workflows.

MEAN Stack Developer Intern **Redbee 365 Studio Pvt Ltd** *Chennai, India (Remote)* **09/2022 – 12/2022**

- Built warehouse management web application using **Angular**, **Node.js**, **Express**, **MongoDB** with optimized UI/UX from Figma designs.
- Improved API response time by **25%** through efficient database indexing and query optimization.
- Developed reusable Angular components ensuring consistency across application modules.

React Native Developer Intern **Earthetic** *Bangalore, India (Remote)* **07/2022 – 10/2022**

- Developed cross-platform mobile applications using **React Native CLI** for iOS and Android platforms.
- Implemented dynamic UI components and e-commerce functionalities with seamless user experience.
- Collaborated with design team to translate Figma designs into responsive mobile interfaces.

MERN Stack Developer Intern **Yes Real Technologies Pvt Ltd** *Bangalore, India (Remote)* **01/2022 – 06/2022**

- Developed full-stack web applications using **MongoDB**, **Express.js**, **React.js**, **Node.js** stack.
- Built college ERP system with features for digitizing manual processes and improving operational efficiency.
- Implemented user authentication, data management, and API integration for frontend-backend communication.

Backend Developer Intern **Hirecraft** *Bangalore, India (Remote)* **07/2020 – 08/2020**

- Developed backend functionalities using **Node.js** and **MongoDB** for project tracking web application.
- Implemented multi-language support (50+ languages) and graphical reporting features.
- Designed and optimized database schemas for efficient data storage and retrieval.

SKILLS

Languages: JavaScript, TypeScript, ES6, Python, SQL, HTML5, CSS3

Frontend Engineering: React.js, Next.js, Angular, Vue.js, React Native, Redux, Web Accessibility (WCAG), Performance Optimization, Caching Strategies, Lazy Loading, Code Splitting, SEO Optimization, Core Web Vitals, WordPress (Elementor Plugin Development), Bootstrap, Material-UI, Tailwind CSS

Backend: Node.js, Express.js, Nest.js, Flask, REST APIs, GraphQL, Apollo GraphQL, Microservices

Databases: MongoDB, PostgreSQL (psql)

Mobile Development: React Native CLI, Android Studio, Xcode, iOS/Android Deployment, Firebase

Cloud & DevOps: AWS (EC2, S3), Cloudflare (CDN, Edge Caching, DNS, SSL), CI/CD Pipelines, GitOps, Docker

API Tools: Swagger UI, Postman, GraphQL Playground

Testing: JMeter, Manual Testing, Performance Testing, Load Testing

Version Control: GitHub, GitLab

Project Management: Jira, Notion, Zoho Sheet, Slack

AI & Machine Learning: AI Integration, Machine Learning Implementation

Practices: Agile/SCRUM, SDLC, STLC, OOP, Code Reviews, Performance Optimization, SEO

PUBLICATIONS

Accurate Fake News Detection in Text-Based Content Using K-Nearest Neighbor, LSTM, MLP and CNN Models

2025 International Conference on Computing Technologies & Data Communication (ICCTDC)

July 2025

Authors: B Sreelatha, Rajesh Kumar A, Shaik Amreen Kousar, Nanthini L, Sweta Priya, A Jaya Lakshmi

DOI: IEEE Xplore

Published research on hybrid deep learning model (CNLSMLKN) achieving 98% accuracy in fake news detection

B.Tech in Computer Science (3.69/4)	JNTU Anantapur – MITS	<i>Andhra Pradesh, India</i> 08/2019 – 05/2023

PROJECTS

B4IGO – Digital Legacy & Asset Management Platform — [Link](#) **Jan '25 – Dec '25**

Technologies: React JS, React Native CLI (Android — iOS), Node JS, MongoDB, Blockchain, Figma, AWS, Android Studio, XCode, GitHub, Visual Studio

Role: Full Stack Developer

Links: [Android App](#) — [iOS App](#)

B4IGO is a comprehensive digital platform designed to help users organize and manage their digital footprint, personal information, and end-of-life preferences. The platform combines blockchain technology with an easy-to-use interface to ensure digital assets are safe, secure, and accessible when needed. It features multiple secure vaults including Personal Information, Healthcare, Digital Accounts, Key Master & Directives, Advisory & Legal Services, Financial, Communication, and Memorial vaults.

Contributions:

- Developed responsive web application using React.js with intuitive UI/UX for managing digital legacy and secure vault systems.
- Built cross-platform mobile application using React Native for iOS and Android, enabling users to access and manage their digital assets on-the-go.
- Implemented blockchain integration and smart contract functionality for secure data storage and transparent asset management.
- Designed and developed multiple vault modules (Personal Information, Healthcare, Financial, Digital Accounts, Legal Services, Communication, and Memorial) with advanced encryption and security protocols.
- Integrated advanced cryptographic technology to ensure privacy and security of sensitive user data and digital assets.
- Developed secure authentication and authorization systems with multi-factor authentication for enhanced security.
- Collaborated with backend team to design RESTful APIs for efficient data exchange between mobile, web, and blockchain infrastructure.

- Implemented features for personalized messaging, end-of-life preferences, and digital footprint management.
- Optimized application performance and ensured scalability for handling sensitive personal and financial information.

NativeNest – Cross-Platform Commerce Platform — [Link](#)

June'25 – Oct'25

Technologies: React JS, React Native CLI, Node.js, Express.js, GraphQL, Apollo GraphQL, Redis, PostgreSQL, AWS EC2, S3, Docker, CI/CD, Android Studio, XCode, GitHub, Postman, JMeter, Visual Studio

Role: Full Stack Developer

Links: [Android App](#) — [iOS App](#)

NativeNest is a production-scale e-commerce platform serving 30K+ users with comprehensive shopping features including product catalog, cart management, order processing, and payment integration. The platform achieves 99.9% uptime through advanced caching strategies and automated deployment pipelines.

Contributions:

- Developed responsive web application using **React.js** and cross-platform mobile apps using **React Native CLI** with native optimizations for iOS and Android.
- Architected backend microservices using **Node JS and Express JS** with **GraphQL and Apollo GraphQL** for efficient data fetching and real-time features.
- Integrated **Redis** caching layer and optimized **PostgreSQL** database queries, reducing load by 60% and achieving sub-100ms response times.
- Deployed on **AWS EC2** with auto-scaling, load balancers, and **Docker** containers, implementing robust **CI/CD pipelines** achieving 99.9% uptime.
- Conducted extensive testing using **Postman** and **JMeter** for load testing, supporting 30K+ concurrent users with payment gateway integration.

Origem India – Lab Grown Diamond Jewellery E-Commerce — [Link](#)

Feb '25 – May '25

Technologies: Next.js, Tailwind CSS, Node JS, Express JS, MongoDB, REST APIs, AWS EC2, S3, Stripe, Razorpay, GitHub, Postman, SEO, Visual Studio

Role: Full Stack Developer

Origem India is an elegant e-commerce platform specializing in lab-created diamond jewellery including rings, earrings, and pendants. The platform emphasizes ethical diamonds designed for elegance and everyday wear, offering a premium shopping experience with detailed product visualizations and secure payment processing.

Contributions:

- Developed high-performance web application using **Next.js** for server-side rendering and styled elegant UI using **Tailwind CSS** with custom design system.
- Built dynamic product catalog with advanced filtering, interactive 360-degree product views, shopping cart, and wishlist features with real-time inventory.
- Developed backend services using **Node.js and Express.js** with **MongoDB** database schemas for product management, inventory tracking, and order processing.
- Integrated multiple payment gateways (**Stripe and Razorpay**) with secure JWT authentication and deployed on **AWS EC2 and S3** with SSL certificates.
- Implemented comprehensive **SEO strategies** including meta tags, structured data, and Core Web Vitals optimization for improved search engine rankings.

Benchmark Automation - AMD

May '24 – Dec '24

Technologies: React JS, Node JS, GitLab, JIRA, Visual Studio

Role: Full Stack Developer

Benchmark Automation delivers innovative automation solutions that streamline business processes and improve efficiency. By leveraging web applications, APIs, and cloud technologies, the company helps clients optimize workflows across various industries.

GSI Sales and Advisory - AMD

Mar '24 – May '24

Technologies: React JS, Python, GitLab, JIRA, Visual Studio

Role: Full Stack Developer

GSI Sales and Advisory provides strategic sales consulting and advisory services to businesses, helping them optimize their sales processes and drive growth. The company offers tailored solutions, leveraging market insights and data-driven strategies to enhance sales performance and customer acquisition.

Upturn - US — [Web Link](#) [App Link](#)

Oct '23 – Feb '24

Technologies: Angular, React-Native CLI (Android — iOS), Android Studio, XCode, GitHub, Visual Studio

Role: React Native Developer - Lead

Upturn is a AI based stock advisor app utilizing adaptive AI for personalized Buy and Sell recommendations. Users access advisories for individual stocks, discover top picks, and create custom Robo-Portfolios. With Upturn, receive tailored financial guidance based on AI technologies like Machine Learning and Quantitative Analysis. It helps users make informed trading decisions by suggesting optimal investment and selling times.

Contributions:

- Developed the responsive mobile interface for Upturn, ensuring seamless integration with backend systems, including Firebase for notifications and deep linking.
- Implemented features allowing users to access personalized Buy and Sell recommendations for individual stocks, with notifications for timely updates.
- Contributed to the creation of custom Robo-Portfolios, enabling users to build diversified investment portfolios, with deep linking for easy portfolio access.
- Utilized React Native to optimize performance and ensure compatibility across different devices, including handling changes to the splash screen and app icon dynamically.

ARIKYA - Digital Transformation of Training and Placements — [Link](#)

Nov '22 – Present

Technologies: Angular, React Native, Bootstrap, Node Js, Express, Swagger, MongoDB, AWS, Gitops, CICD Pipeline, AI, Search Engine Optimization, Github

Role: Full Stack Developer

Arikyia is an AI-powered platform which discovers the path to Skill Enhancement, Automated Recruitment and Remarkable achievement.

Contributions:

- Led a team through responsive web and mobile application development, overseeing the entire lifecycle and developing both frontend and backend.
- Engineered complex functionalities, including AI-powered compiler designing for coding practice, secure database designing, and intelligent coding assessment features.
- Implemented standardized setups, focusing on security, performance optimization, lazy loading, and user-friendly UI development for a high-performance application.
- Successfully deployed applications on AWS EC2 Instances with a robust CICD pipeline and executed SEO strategies.
- Leveraged Zoho Sheet, Jira for structured development progress tracking.

NextZen ERP HRMS

July '23 – Sep '23

Technologies: React-Native CLI (Android — iOS), Android Studio, XCode, GitHub, Visual Studio

Role: React Native Developer

NextZen ERP HRMS project is a unified solution integrating HRMS, Accounting, and Warehouse Management functionalities.

Contributions:

- Developed and implemented the responsive mobile interface for the NextZen ERP HRMS project using React Native, ensuring seamless integration with existing backend systems.
- Utilized advanced React Native techniques to optimize performance, including lazy loading, code splitting, and asynchronous data fetching.

- Designed and built the HRMS module, streamlining payroll, attendance, and performance tracking.
- Contributed to architecture and development of Accounting module, enabling comprehensive financial management.
- Collaborated with backend developers to establish secure RESTful APIs for data integrity.

Nova Physician Wellness Center

Mar '23 – Jun '23

Technologies: React-Native CLI, Figma, Android Studio, XCode, GitHub, Visual Studio

Role: Database Architect, UI / UX Designer, React Native Developer - Lead

The NPWC app enables users to monitor diet plans and exercise routines, offering expert advice from dietitians and fostering connections with fitness enthusiasts for a balanced lifestyle.

Contributions:

- Designed and implemented the user interface using Figma, ensuring a visually appealing and intuitive user experience for the NPWC app.
- Developed the database architecture to efficiently store and manage user data, diet plans, exercise routines, and expert advice, optimizing performance and scalability.
- Implemented features allowing users to receive expert advice from dietitians through real-time messaging, leveraging technologies like Firebase for instant communication.
- Integrated features allowing users to track diet plans and exercise routines, receive expert advice from dietitians, and connect with fitness enthusiasts, enhancing the app's usability and value.

Buzz Staff Women

Jan '23 – Mar '23

Technologies: React Js, Redux, Bootstrap, GitHub, Jira, Visual Studio

Role: React Developer

Buzz Staff Women is a Women Empowerment NGO fostering community and growth among women, extending its reach to rural areas for training sessions. It emphasizes cultivating inner strength ('Self-Shakti') and its practical application in daily life. By establishing local Beehives and women's groups, it institutes a sustainable learning ecosystem in each village.

Contributions:

- Developed the user interface for the Buzz Staff Women app using React, efficiently managing state with Redux for centralized data handling and seamless updates across components.
- Implemented interactive features such as form validation and user authentication using React Hooks and Redux actions, ensuring robust functionality and user security.
- Integrated React Router and Redux for seamless navigation and state management, providing users with a smooth and intuitive browsing experience.
- Collaborated with the team to optimize performance using React's virtual DOM and Redux's efficient state management, delivering a fast and responsive app experience.
- Contributed to the development of reusable UI components and Redux reducers, promoting code reusability and maintainability throughout the project.

BookingBee — [Link](#)

Sep '22 – Dec '22

Technologies: Angular, Bootstrap, Material-UI, AI, Slack, GitHub, Visual Studio

Role: Frontend Developer

BookingBee is an AI-powered appointment scheduling platform for beauty and wellness businesses.

Contributions:

- Developed UI with Figma-provided UI/UX designs and advanced code optimization techniques, ensuring a seamless and visually appealing responsive user experience.
- Designed reusable components to maintain consistency and streamline development across the application.
- Effectively reported work progress, particularly focused on API integration, through Jira, showcasing a systematic approach.

Dynamic Ecommerce App

Jul '22 – Oct '22

Technologies: React-Native CLI, Figma, Android Studio, XCode, GitHub, Visual Studio

Role: React Native Developer - Lead

It is an cross platform app designed with dynamic UI for Ecommerce.

Contributions:

- Developed and optimized the user interface for the ecommerce app using React Native, ensuring a seamless and engaging shopping experience across iOS and Android platforms.
- Implemented essential features such as product listing, cart management, and checkout functionalities, adhering to design specifications and user experience guidelines.
- Integrated third-party APIs for payment gateways and shipping services, enabling secure transactions and efficient order fulfillment within the ecommerce app.

ERP

Jan '22 – Jun '22

Technologies: React JS, React Hooks, Bootstrap, Redux, NodeJS, MongoDB, GitHub, Visual Studio

Role: Full Stack Developer - Lead

Product to digitalize all the manual process of all the activities in college.

Contributions:

- Designed and developed the front-end interface of the ERP project for the college using React, ensuring user-friendly interactions for administrators, faculty, and students.
- Implemented back-end functionalities using Node.js, including user authentication, data management, and API integration.
- Collaborated with the team to design and implement features and overall functionality required for college for efficiency of the ERP system.

College Feedback and Task Management System

Nov '21 – Dec '21

Technologies: Angular, Bootstrap, Node Js, Express, Swagger, MongoDB, AWS, Gitops, Github

Role: Full Stack Developer

The College Feedback and Task Management System enables faculty and students to exchange feedback seamlessly. Admins can view and download feedback reports, while faculty can upload tasks for student completion. Students can submit tasks and receive ratings from faculty within the system.

Contributions:

- Developed frontend interfaces for feedback submission and task management using modern web technologies.
- Implemented backend functionalities for data storage and retrieval, ensuring efficient communication between frontend and backend components.
- Conducted thorough testing to ensure system reliability and performance across different scenarios.
- Collaborated with team members to design and refine system features, ensuring alignment with project goals.
- Contributed to the overall architecture and design decisions to create a robust and user-friendly system.

AI based Slum Control — Smart India Hackathon

Sep '21 – Oct '21

Technologies: Angular, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer

AI based Slum Control is a web app with advanced AI for slum identification via image segmentation, coupled with automated employment solutions. Created a job platform tailored for slum dwellers, enhancing opportunities and empowerment. Integrated Twilio for automated messaging, streamlining communication for increased accessibility. Proficiently utilized the MEAN stack, collaborating with a dedicated team for seamless deployment on Heroku.

Online Exam Fee Payment

Jul '21 – Aug '21

Technologies: Angular, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer - Lead

Led the development of a web app for online exam fee payment with separate logins for Students and Admin. Integrated a payment gateway for convenient transactions and ensured secure API authentication. Implemented efficient initial page

loading and comprehensive database schema design. Utilized agile practices for efficient project delivery and collaborated closely in bug-fixing.

Digital Library

May '21 – Jun '21

Technologies: Angular, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer - Lead

It is a web application offering students technical and verbal skill enhancement through quizzes, study materials, and course rankings. Conducted in-depth analysis of user requirements for the library system. Developed a user-friendly UI and integrated APIs with JWT token-based security. Managed file systems efficiently using Node.js for data storage and retrieval. Maintained the codebase on GitHub, ensuring version control and streamlined development workflow.

Digital Admission Process

Mar '21 – Apr '21

Technologies: Angular, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer

A web application facilitating the admissions process for the institute, enabling students to apply and admission teams to manage applications efficiently. Integrated APIs to enhance system functionality and implemented virtual server hosting for optimal performance. Deployed a holistic solution streamlining the college admission process through automation, benefiting both administrators and users.

Recruitment Process for Internships or any events

Jan '21 – Feb '21

Technologies: React JS, React Hooks, Bootstrap, Redux, NodeJS, MongoDB, GitHub

Role: Full Stack Developer

A web app where candidates submit applications for internships or events, including resumes, which are reviewed by recruiters. Interviews are conducted, and feedback is provided by interviewers to evaluate candidates. Recruiters then select or reject candidates based on feedback. Upon selection, candidates receive a group link to join discussions related to the event or internship.

Agri-Farm — Smart India Hackathon

Dec '20 – Jan '21

Technologies: React Native Expo, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer - Lead

A React Native mobile application for Agriculture Food processing, providing farmers with crop cultivation updates, market prices, and customer interaction. Integrated APIs and third-party services to enhance functionality. Prepared APK files for Android and utilized TestFlight for iOS for comprehensive testing.

Event Accounting Management

Nov '20 – Dec '20

Technologies: Angular, Bootstrap, NodeJS, ExpressJS, Swagger, MongoDB, GitHub

Role: Full Stack Developer - Lead

The system centralizes fund management for events, tracking all transactions and their event-specific histories. Developed backend functionalities to track transactions and event-specific histories, ensuring seamless data management. Additionally, designed and implemented the user interface, enabling transaction printing and facilitating transparent financial management.

Automation of Exam Hall and Seating Arrangement

Oct '20 – Nov '20

Technologies: React JS, React Hooks, Bootstrap, Redux, NodeJS, MongoDB, GitHub, Visual Studio

Role: Full Stack Developer - Lead

An online process-based web application simplifying seat allocation during examinations for colleges and students. Designed with distinct logins for admin and students, facilitating tasks like hall number management and exam timetable uploads. Automated seating arrangements and distributed hall numbers and seating via email, while enabling admin to print seating arrangements. As a full stack developer, contributed to the application's design, implementation, and functionality across both frontend and backend components.

Automation plugin of Attendance Marking in MS Teams

Aug '20 – Sep '20

Technologies: React JS, React Hooks, Bootstrap, NodeJS, MongoDB, GitHub

Role: Full Stack Developer - Lead

An Automation Plugin for attendance marking in MS Teams, streamlining virtual online classes processes. Integrated seamlessly with MS Teams, automating attendance tracking and enhancing convenience. Designed and developed UI, backend, and API integration for real-time data synchronization.

Task Forz

Jul '20 – Aug '20

Technologies: NodeJS, MongoDB, GitHub, Visual Studio

Role: Backend developer

A responsive web app enhances project tracking for individual tenants with graphical reports for Talent Micro Private Limited in Bangalore. Available in fifty languages, including Arabic, it allows tenants to add projects and teams while tracking their status and documentation. Providing comprehensive project management records.

Employee Leave and Salary Management System

May '20 – Jun '20

Technologies: React JS, React Hooks, Bootstrap, Redux, NodeJS, MongoDB, GitHub, Visual Studio

Role: Full Stack Developer - Lead

This system manages employee leave requests and automates salary generation. Employees apply for leave, which is approved by their respective heads before processing. Salary and pay bills are generated based on approved leave types, with email notifications sent to all employees upon salary crediting.

Automated Time Table Generation

Mar '20 – Apr '20

Technologies: React JS, React Hooks, Bootstrap, NodeJS, ExpressJS, MongoDB, GitHub

Role: Full Stack Developer - Lead

The Automatic Timetable Generation system, simplifying schedule creation for educational institutions. Contributed by designing algorithms and interfaces, integrating data sources, and conducting rigorous testing to ensure reliability and accuracy. The system automates timetable creation, considering resource availability, faculty preferences, and class timings, resulting in optimal scheduling for students and faculty while minimizing conflicts.

Examination Report Generation

Feb '20 – Mar '20

Technologies: React JS, React Hooks, Bootstrap, NodeJS, ExpressJS, MongoDB, GitHub

Role: Full Stack Developer

A comprehensive web application for generating semester examination reports in universities, featuring distinct logins for admins, students, and faculty. Admins upload subject information, while faculty input student marks, assessments, and syllabus details, including CO's and PO's, via Excel. Students provide feedback used for internal evaluation in report generation.

BGMI Tournaments

Jan '20 – Feb '20

Technologies: React JS, React Hooks, Bootstrap, NodeJS, ExpressJS, MongoDB, GitHub

Role: Full Stack Developer

A webpage to conduct online tournaments for any kind of events or occasions. I chose BGMI as reference and designed an responsive webpage to get registrations for the tournament.
